

My experience of use of multifocal lenses

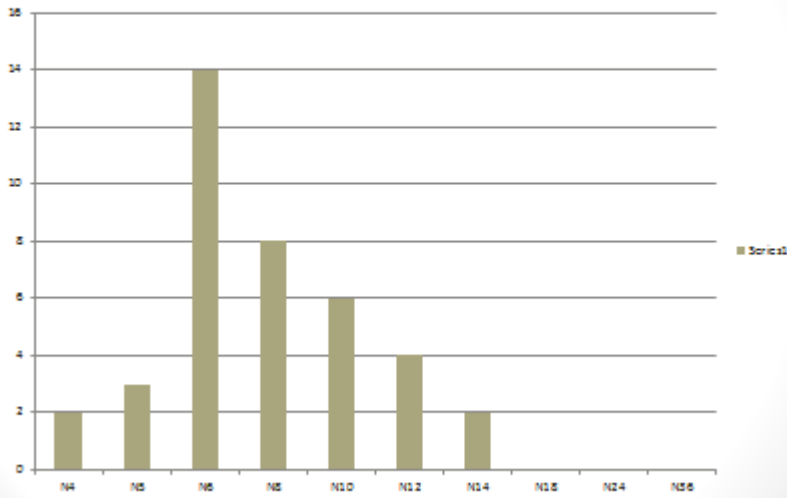

- 99% no severe halos
- 90% no glare
- 94% satisfied with result without glasses
- 95% better than driving vision without glasses
- 80% able to read very small print without glasses.

Distance vision without glasses: 92% patients could see 6/6 or better.

Near vision without glasses:

85% patients could see newspaper or smaller print without glasses with each eye.

Residual refractive error:

87% patients were $\leq \pm 0.5$ D error postop and 95% within $\leq \pm 0.625$ at 3 months.
